

# SoftenAll™

Wetcleaning Fabric Softener

### Background

Laidlaw formulated this conditioner for use in water based cleaning “wet cleaning” for traditional “dry clean only” garments. When this is coupled with a gentle cycle, wet cleaning detergent and other supplements, dry clean only garments can be cleaned via this new “wet clean” process.

### Typical Application

Cleaners looking for an alternative to a solvent based cleaning process can use wet cleaning. Wet cleaning has become very popular in areas where dry cleaning solvents, specifically perchloroethylene, are under regulatory pressure. Wet cleaning operations require the appropriate chemicals and equipment to be able to process dry clean only garments in water.

### Top 3 Highlighted Characteristics

1. Conditioner
2. Water
3. Systems Savings

### SoftenAll

	Code	Description
