

GreenSPOT™

No-Flush Pre-Treatment, Leveling Agent
& Cleaning Booster for GreenEarth® (D5) Systems

Puts the Clean into Green™

Reduce re-cleans
and time on the
spotting board
with GreenSPOT!

GreenSPOT™ is an effective pre-treatment designed to enhance stain removal and cleaning performance with GreenEarth® (decamethylcyclopentasiloxane; “D5”). **GreenSPOT** has been formulated as a companion product to **GreenSOL™ Detergent** to provide you with extra stain removal power to target stains and trouble areas.

GreenSPOT is designed as a no-flush pretreatment: simply treat the clothes and clean them in your machine without flushing on the board; **GreenSPOT** gets rinsed out in the machine without harming your system.

When used as a no-flush pre-treatment, **GreenSPOT** also works as a cleaning booster, improving the stain removal and soil suspension capabilities of your cleaning system on the whole load, not just the garments to which it is applied. **GreenSPOT** helps you “Put the “Clean into Green”™”.

How GreenSPOT Helps Put the Clean into Green:

- **Helps Remove Difficult Stains**

GreenSPOT makes removal of stains like oily foods, cosmetics and cuff and collar grime easier, so you can reduce your time on the spotting board before and after cleaning. Although effective, **GreenSPOT** is also safe to use on most colors and fabrics.

- **Saves Time**

Reduce your time spent on the board; simply spray or brush **GreenSPOT** on stains and soil prior to cleaning, allow to penetrate, and then clean – no need for time-consuming flushing and drying on the board. **GreenSPOT** gets rinsed out in the machine without harming your system.

- **Prevents Spotting Rings**

GreenSPOT controls water, so when wet-side stain removal techniques are employed, **GreenSPOT** can be used to “level” the area and help prevent damage to fabrics or dyes from residual moisture. **GreenSPOT** is also self-leveling, so it helps prevent re-deposition and spotting rings.

- **Improves System Cleaning Power**

When used as a no-flush pre-treatment, **GreenSPOT** works as a cleaning booster, improving the stain removal and soil suspension capabilities of your cleaning system. Regular use of **GreenSPOT** will aid in cleaning the whole load, not just the garments to which it is applied.

- **Reduces Re-Cleans**

Re-cleans are costly to your workflow, your productivity, and your profits. To reduce re-cleans, simply apply **GreenSPOT** on soiled areas before cleaning and get clothes cleaner the first time. **GreenSPOT** reduces graying and re-cleans while increasing your productivity.

- **Eco-Conscious**

Over 60% soy based, all ingredients are biodegradable. **GreenSPOT** contains no Proposition 65 listed ingredients, perchloroethylene or other halogenated compounds.

Use Instructions: Three Easy Ways to Use *GreenSPOT*[™]

Use At The Spotting Board To Remove Stains.

1. Apply *GreenSPOT* directly to the fabric and completely saturate stained area.
2. Work the stain with spatula or by tamping with a dry-side brush.
3. When soil is loosened or removed from fabric, continue with the drycleaning process. *GreenSPOT* is designed to remain on the fabric prior to drycleaning, so that you can machine-rinse spotted garments. Therefore, do not flush, rinse or dry prior to drycleaning.

Pre-Treat Soiled Areas. Simply spray, wait a few minutes, then clean.

1. Use the 32 oz. *GreenSPOT* spray bottle to apply full strength. Do not dilute. Completely saturate the area needing treatment.
2. Areas of heavy soils such as hemlines and around pockets may require tamping.
3. Allow *GreenSPOT* several minutes to work.
4. Do not flush. Simply dryclean.

Control Moisture During Drycleaning (Leveling):

1. After using any wet-side stain removal agent AND after fabric has been rinsed and air-dried with the spotting gun, apply *GreenSPOT* liberally to the pre-spotted areas. This will control moisture that may remain in the fabric.
2. Lightly tamp the wet area, including fabric area just outside of ring. Do not flush, rinse or dry.
3. Continue with drycleaning process.

*Please Note: **GreenSPOT** is safe for most fabrics and colors, but if color fastness is questionable, test garments in an unexposed area. Excessive mechanical action can damage sensitive fibers. Refrain from scrubbing or other harsh mechanical action.*

*How to Order **GreenSPOT** No-Flush Pre-Treatment, Leveling Agent, and Cleaning Booster for GreenEarth (D5) Systems*

***GreenSPOT** is sold by authorized Street's distributors and is available in 1-gallon jugs. Labeled spotting bottles and spray bottles are available from your authorized Street's distributor.*

Before using any chemical product, review the Material Safety Data Sheet (MSDS) for safe handling and proper disposal.

For professional drycleaning use only.
